

Sending Serum for Indirect Immunofluorescence (IIF)

Please reference the below if aid is needed in collecting patient sera. If venipuncture is offered in your office, any red top collection tube will suffice. We prefer to receive serum, although whole blood is acceptable. We are happy to provide any supplies and can be reached directly at (503) 906-7300.

1. Collect blood in a standard red top tube.

2. Centrifuge to separate serum from red cells; 1500rpm for 5 minutes is adequate.

3. Transfer serum to the shipment tube.
